Bright Futures Preventive Services Quality Improvement Measures

Bright Futures provides a set of materials and measures to track and document preventive care activities and services. These resources facilitate engagement of pediatric health care professionals in performing quality improvement (QI) activities at the practice level or in partnership with others at the state or community level. These activities can improve preventive care and achieve outcomes related to the Bright Futures goals of disease prevention, risk and disease detection, and health promotion.

**BRIGHT FUTURES PREVENTIVE SERVICES QI MEASURES**

Measurement is a critical step in “translating” the *Bright Futures: Guidelines for Health Supervision of Infants, Children, and Adolescents*, 4th Edition, into quantifiable components through chart audit and/or office systems inventory. The lists below combine nationally endorsed measures and measures tested in, or adopted from, previous QI preventive services projects. To be included, the measures must reflect an important component of the *Bright Futures Guidelines* and be appropriate for practice change over time. **These lists are designed to be dynamic and will be updated as new components of high-quality care preventive service visit are identified and tested.** The *Bright Futures Tool & Resource Kit*, 2nd Edition, includes core tools that provide these measures. These core tools are the Previsit Questionnaire and the Visit Documentation Form.

**Infancy & Early Childhood**
- Elicit and address patient/family concerns
- Perform developmental and autism screening and follow-up
- Elicit and discuss patient/family strengths
- Perform age-appropriate risk assessment and medical screening
- Measure and plot weight for length until 24 months and body mass index (BMI) beginning at 24 months
- Perform maternal depression screening and follow-up
- Perform oral health risk assessment
- Provide anticipatory guidance

**ABOUT BRIGHT FUTURES**

Bright Futures is a national health promotion and prevention initiative, led by the American Academy of Pediatrics and supported by the Maternal and Child Health Bureau, Health Resources and Services Administration. The *Bright Futures Guidelines* provide theory-based and evidence-driven guidance for all preventive care screenings and well-child visits. Bright Futures content can be incorporated into many public health programs such as home visiting, child care, school-based health clinics, and many others. Materials developed especially for families are also available. Learn more about Bright Futures and get Bright Futures materials by visiting [brightfutures.aap.org](http://brightfutures.aap.org).

American Academy of Pediatrics

DEDICATED TO THE HEALTH OF ALL CHILDREN®
Middle Childhood & Adolescence

- Elicit and address patient/family concerns
- Perform developmental surveillance/identification of patient strengths
- Perform risk assessments and medical screenings (vision, hearing, tuberculosis, anemia, dyslipidemia, alcohol/substance abuse and sexually transmitted infections) and measure and plot BMI percentile based on age and gender
- Perform chlamydia screening and follow-up
- Perform HIV screening and follow-up
- Perform adolescent depression screening and follow-up
- Perform cholesterol screening and follow-up
- Provide anticipatory guidance

6 Office-Based System Measures (for both groups)

- Use a preventive services prompting system
- Use a recall/reminder system (to address immunizations and well-child visits)
- Use a record-keeping system to track referrals (paper based or electronic)
- Use a system to identify children with special health care needs
- Link families to appropriate community resources
- Use a strength-based approach and a shared decision-making strategy
