| Anemia    | • At risk of iron deficiency because of special health needs  
• Low-iron diet (eg, nonmeat diet)  
• Environmental factors (eg, poverty, limited access to food) | • Do you ever struggle to put food on the table?  
• Does your child’s diet include iron-rich foods such as meat, iron-fortified cereals, or beans? | Hematocrit or hemoglobin |
| Lead      | Local health care professionals should work with state, county, or local health authorities to develop sensitive, customized questions appropriate to the housing and hazards encountered locally.  
The Centers for Disease Control and Prevention recommends blood lead testing for all refugee children who are 6 months to 16 years of age upon entering the United States. Repeated blood lead level testing of all refugee children who are 6 months to 6 years of age 3 to 6 months after they are placed in permanent residences should be considered a “medical necessity,” regardless of initial test results.  
*If no previous screen or a change in risk*  
• Does your child live in or visit a home or child care facility with an identified lead hazard or a home built before 1960 that is in poor repair or was renovated in the past 6 months? | Lead blood test |

Referral to a dental home by the primary care physician or health care professional has been recommended, based on risk assessment, as early as 6 months of age, 6 months after the first tooth erupts, and no later than 12 months of age.

- Does your child have a dentist?

The US Preventive Services Task Force recommends that primary care clinicians prescribe oral fluoride supplementation at currently recommended doses to children starting at 6 months of age whose primary water source is deficient in fluoride.

- Does your child’s primary water source contain fluoride?

Oral fluoride supplementation

Referral to dental home or, if not available, oral health risk assessment

Tuberculosis

- Children infected with human immunodeficiency virus (HIV)

- Was your child or any household member born in, or has he or she traveled to, a country where tuberculosis is common (this includes countries in Africa, Asia, Latin America, and Eastern Europe)?

- Has your child had close contact with a person who has tuberculosis disease or who has had a positive tuberculosis test result?

- Is your child infected with HIV?

Tuberculosis test

- Based on risk factors noted in italics or on the risk assessment questions listed here.
